

## ABSTRACT OF THE DISCLOSURE

A security alarm device is replicated in a toy vehicle. The security device includes a remote control which also can control vehicle functions. The remote control may control alarm arm and disarm, alarm and vehicle sounds such as arm, 5 disarm, alarm set off, engine ~~rev'ing~~ and tire screeching, motor drive, and vehicle lights. The security alarm device includes an LED which indicates whether the alarm is armed or unarmed, and a motion sensor which sets the ~~alarm~~ off (e.g., emitting a siren sound) when the toy vehicle is moved in its armed state.
